TECHNICAL DATA SHEET

CHAIN WAX CONDITION

Ref. : 930

1. GENERAL DESCRIPTION

Super Help Cain Wax is a wax emulsion, Lubricant for bicycle chains especially studied and developed to ride in dry and wet conditions.
Super Help Chain Wax penetrates, lubricates, repels dirt and protect against corrosion.
Forms a dry film which protects the bicycle chain, repelling dirt and reducing friction.
Lubricating additives addition helps to minimise surface to surface contact with an anti-friction shield.
Super Help Cain Wax is Biodegradable.
The bicycle rider will get a clean and smooth drivetrain.

2. FEATURES

- Helps to minimise surface to surface contact with an anti-friction shield.
- High performance lubricant incorporating a sophisticated additive package to provide long lasting protection against friction, wear and corrosion.
- Withstands extreme load carrying situations in dry weather conditions.
- Outperforms conventional lubricants under extreme pressures.
- Penetrates and displaces moisture leaving a protective film.
- Safe on all metals and alloys.
- The plastic dropper bottle offers functional precision for added convenience.

3. APPLICATIONS

- Clean the chain with Super Help Chain Degreaser, Super Help Chain Wax should be applied on a clean, degreased and dry chain. Any residual of lubrication must be removed.
- Rinse your chain with clean water and let it dry.
- Shake well the container and apply all over the chain, allow penetrating.
- Remove the wax in excess using a clean cloth and allow Chain Wax to dry completely before Cycling.
- Do not degrease again
- For the best performance, repeat the application every time you use the bike always allowing Chain Wax to dry completely before Cycling.

4. DIRECTIONS

- **On bike cleaning:** Rinse well with clean water and re-apply one or two coats of Chain Wax as per the applications instructions.
- **Thorough Cleaning:** For a more intensive clean, use very hot water and pour slowly over the bottom span of the chain (between the rear derailleur and chainring) while turning the cranks backwards. This melts the wax and rinses it out of the chain together with trapped dirt. Follow this up with a couple rounds with the help of a brush until the cleaning solution is not visibly dirty anymore. Always rinse well with clean water and re-apply two coats of Chain wax as per the application instructions.
- **Deep Cleaning**: For deep cleaning, the chain can be removed and degreased with Super Help bike degreaser or with organic solvent like kerosene or white spirits. Follow this up with a rinse in solvent like IPA (Isopropyl Alcohol) to remove any possible residue left by the degreasers and wash with very hot water. Let the Chain to be dryed and re-apply two coats of lube as per the application instructions
- Super help Chain Wax is a biodegradable wax/water emulsion, so it is natural to have a separation of the emulsion when left standing for long periods of time. When you note a separation layer in the bottom of the container just shake very well to re-emulsionate the product.
- **Storage**:Super Help Chain Wax should be stored between 5°C and 35°C with the cap on.
  If it freezes (below 0℃) or dries out, it becomes thick. It can be restored to a creamy liquid by adding a little hot water and shaking it up (normally about 10-15% of water). Keep out of reach of children.

6. PACKAGING

Plastic dropper bottle: 12 x 110 ml
Bar code Nr. 8028687009309

Date : 08-10-2026
